

# Introduction to Forensics Workshop

Hi NullSec members! 😊

Before joining us on our workshop for an introduction to forensics, please follow this pre-installation guide to make sure everything is set-up and ready to go (approximately 10 minutes, mostly loading time). Should you encounter any issues, feel free to contact any of us on Telegram:

- Syn Kit (@elphabetsoop)
- Kairos (@kairostay)

## Installation of Kali Linux VM

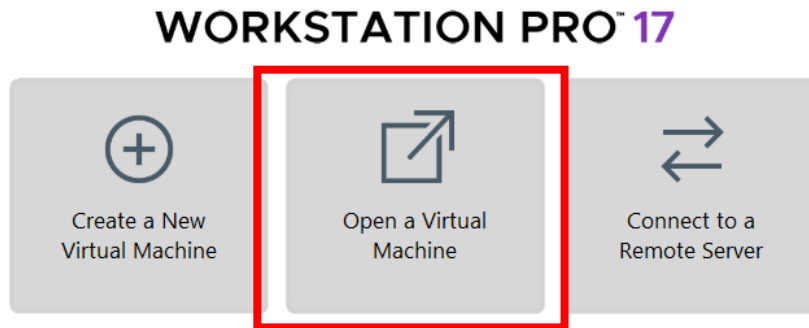

1. Visit <https://cdimage.kali.org/kali-2024.2/kali-linux-2024.2-vmware-amd64.7z> to download the Kali Linux VM for VMware.
2. Unzip the file using 7Zip (Install it here if you don't already have it: <https://www.7zip.org/>)

**Download 7-Zip 24.07 (2024-06-19) for Windows x64 (64-bit):**

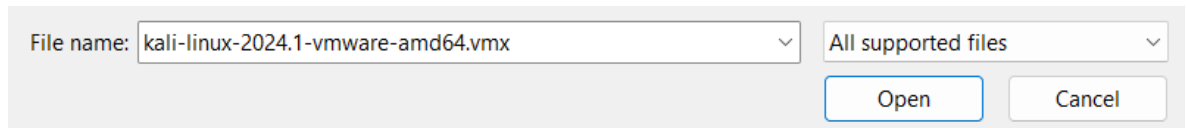

Link	Type	Windows	Size
<a href="#">Download</a>	.exe	64-bit x64	1.6 MB

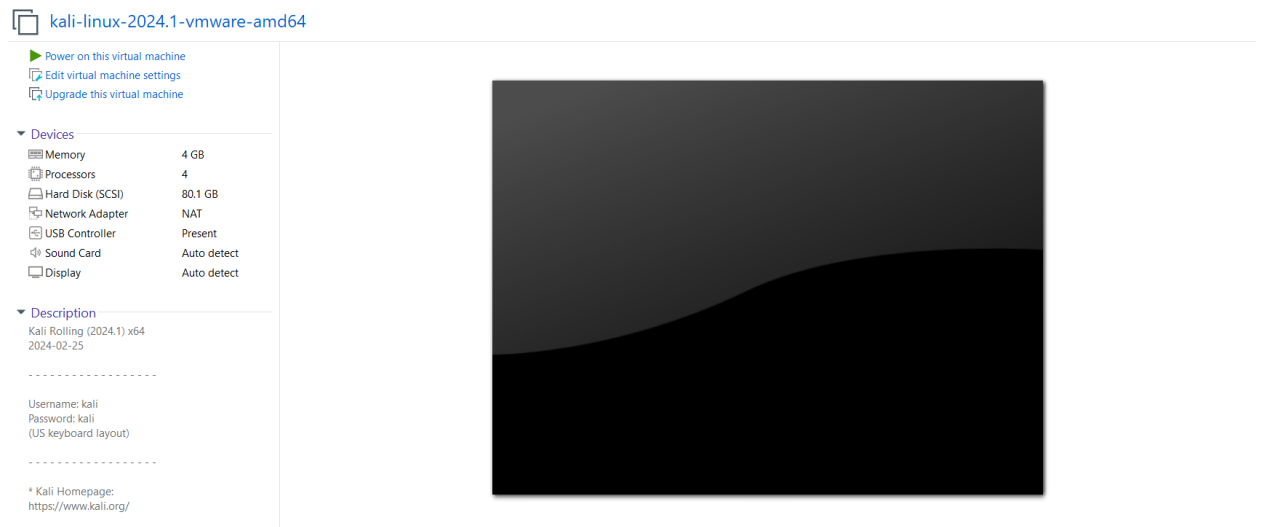

3. In VMWare, click “Open a Virtual Machine”:

4. Navigate to where you unzipped the file, and open the “.vmx” file  
Example:

5. You should get the following screen:

## Set up of CTFd (AKA our CTF Platform) Account

1. Visit <https://ctf.nullsecsig.com> and click Register

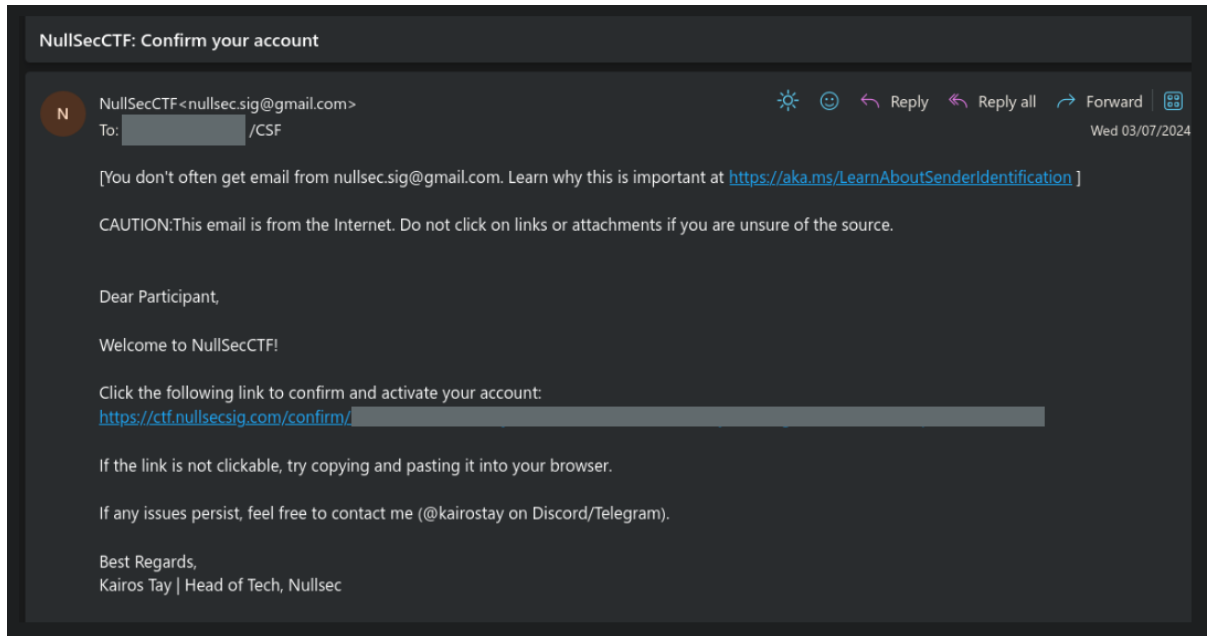

2. Register for an account – pick a cool name!

Note that you HAVE to use your student email for this.

The screenshot shows the registration form on the NullSecCTF website. The form is titled 'Register' in a large, stylized font. It contains three input fields: 'User Name', 'Email', and 'Password'. The 'User Name' field has a placeholder text 'Your username on the site'. The 'Email' field has a placeholder text 'xxxxxxx@connect.np.edu.sg' and a note 'Never shown to the public'. The 'Password' field has a placeholder text 'Password used to log into your account'. A 'Submit' button is located at the bottom right of the form.

### 3. Check your email for the confirmation link.

That's all.
